Confidence Description
This conference, now in its 38th year, has helped thousands of clinicians translate the latest evidence-based research into actual clinical decision-making. This year, new medications fit into treatment strategies, and get direct guidance on the toughest clinical challenges. Thirty internationally-recognized faculty from the Massachusetts General Hospital Department of Psychiatry and McLean Hospital share their primary research and experienced clinicians andDY more than forty-five clinical and research programs in the Massachusetts General Hospital Department of Psychiatry. Engage experts like Zeina Chemali, Andrew Nierenberg, and David Henderson face-to-face, ask your most pressing clinical questions, and leave with guidance for the entire spectrum in psychopharmacology. From medication to depression to anxiety to schizophrenia, bipolar to personality disorders, to addiction, and so much more.

Learning Objectives
Upon completion of this program, participants should be able to:

• Identify national, evidence-based pharmacologic and non-pharmacologic therapies for patients with common bipolar, treatment-resistant, and post-partum depression.
• Identify challenges in maintenance of long-term recovery and the liability issues associated with psychopharmacology.
• Compare the neurobiology and evidenced-based treatment approaches to addiction, anxiety, schizophrenia, mood disorders, and recovery.
• Review the course and treatment of psychiatric disorders during pregnancy and menopause.
• Recognize psychosocial issues and evidence-based treatment modalities for eating and sleep disorders.
• Discuss diagnostic and evidenced-based treatment strategies for pediatric onset mood disorders.
• Review drug interactions and the pharmacotherapy of adult ADHD and genetic disorders.
