

# Skin Picking, Trichotillomania, and Hoarding

Lisa Zakhary, MD PhD

Medical Director, OCD and Related Disorders Program

Director of Psychopharmacology, Excoriation Clinic and Research Unit

Massachusetts General Hospital 11/07/2020

www.mghcme.org

#### Disclosures

#### Research Support: Promentis Pharmaceuticals, Inc.

www.mghcme.org

#### **Excoriation (Skin-Picking) Disorder**

# Clinical features of skin picking

- Prevalence 1.4-5.4%
- Women>>men
- <20% of pts who pick actually seek treatment
- Triggers
  - Removing a blemish
  - Coping with negative emotions (depression, anger, anxiety)
  - **Boredom/idle hands** ( $\uparrow$  w/ work from home during pandemic)
  - Itch
  - Pleasure
- Varying degrees of self-awareness
  - Focused picking
  - Automatic picking

MASSACHUSETTS GENERAL HOSPITAL PSYCHIATRY ACADEMY

Keuthen. Compr Psychiatry. 2010; Hayes. J Anxiety Disord. 2009;Grant. Am J Psychiatry. 2012; Grant. Trichotillomania, skin picking, and other body-focused repetitive behaviors. 1st ed. 2012

## Complications

- Scarring/disfigurement
- Avoidance
- Social and occupational dysfunction
- Cellulitis/sepsis
- Excessive blood loss
- Paralysis

Grant. *Am J Psychiatry*. 2012; Grant. *Trichotillomania, skin picking, and other body-focused repetitive behaviors*. 1st ed. 2012; Flessner & Woods. *Behav Modif*. 2006

# Diagnosis of skin picking D/O in DSM-5

- Recurrent skin picking resulting in skin lesions
- Repeated attempts to stop picking
- Causes significant distress or impairment
- Not due to a substance (e.g. amphetamine, cocaine)
  - Substance-induced OCRD, e.g. Cocaine-induced OCRD
- Not due to a medical condition (e.g. HoTH, liver disease, uremia, lymphoma, HIV, scabies, atopic dermatitis, blistering skin disorders)

> OCRD due to a medical condition, e.g. OCRD due to HIV with skin picking

• Not secondary to another mental disorder (e.g. delusions of parasitosis)

### Treatment of skin picking

- Clinically, CBT considered first-line but no studies comparing meds to CBT
- Medication studies limited, SSRIs and N-acetylcysteine effective
- Consider dermatology referral
  - Skin care
  - Treatment of dermatologic triggers for picking (e.g. acne, itch)
- For moderate-severe cases or if indicated by clinical hx, check labs
  - CBC
  - CMP
  - TSH
  - Tox screen
  - +/- HIV

# CBT for skin picking (and hair pulling)

#### Habit reversal training

- Awareness training- identify stimuli for picking or pulling
- Competing response- replace picking/pulling with harmless motor behavior

#### **Cognitive restructuring**

Challenge maladaptive thoughts related to picking/pulling

#### **Stimulus control**

- Modify environment to reduce opportunities to pick skin or pull hair (e.g., wear gloves)
- RCT of HRT vs waitlist for skin picking shows 77% reduction in picking in HRT group, 16% WL

## First-line medications for skin picking

#### • SSRIs

- Limited data, but multiple studies showing that SSRIs can reduce skin picking
  - Fluoxetine, 2 positive RCTs (~55 mg/d, ~80mg/d)
  - Fluvoxamine (~110 mg/d), positive open label study
  - Escitalopram (~25 mg/d), positive open-label study
  - Sertraline (~100 mg/d), large case series (n=31) with 68% response rate
  - Citalopram 20 mg/d did not different from placebo in RCT but study was only 4 weeks and likely too short
- No direct comparative studies, SSRIs thought to be equally effective
- Unlike BDD and OCD, response not delayed, standard 8 wk trial advised

#### N-acetylcysteine (NAC)

- OTC glutamatergic modulator
- Addiction, gambling, OCD, schizophrenia, BPAD
- Significant improvement in RCT of pts w/ skin picking and RCT of hair pulling
- Beneficial in open-label study of skin picking in pts w/ Prader-Willi syndrome
- Start 600 mg PO BID x 2 wks, then 1200 mg PO BID (>6 week trial)
- Preferred to SSRI if no comorbid depression or anxiety

Simeon. J Clin Psychiatry. 1997; Bloch. Psychosomatics, 2001; Arbabi. Acta Med Iran 2008; Arnold. J Clin Psychopharmacol, 1999; Keuthen. J Int Clin Psychopharmacol, 2007; Kalivas. Arch Dermatol. 1996; Grant. JAMA Psychiatry. 2016; Miller & Angulo. Med Genet A. 2014, Lochner C.Neuropsychiatr Dis Treat. 2017

# Other medications for skin picking

- Naltrexone, 50-100 mg/d ٠
  - Opioid antagonist used in ETOH and opioid use, kleptomania, gambling
  - Only 2 case reports but often used given benefit in hair pulling & canine acral lick dermatitis
  - Hepatotoxicity with doses >300 mg/d, check LFTs 1m, 3m, 6m, yearly
- Mood stabilizers
  - **Topiramate**, 25-200 mg/d (open-label study, n=10), robust improvement
  - Lithium, 300-900 mg/d (case series, n=2)
- Atypical antipsychotics
  - Limited data but used given benefit in hair pulling
  - Aripiprazole, 5-10 mg/d (3 case reports)
  - Olanzapine, 5 mg/d (case report)
  - Risperidone, 1.5 mg/d (case report)
- Treatments for itch
  - Gabapentin (~100-1800 mg/d) or pregabalin (75-300 mg/d) can reduce itch, reviewed in Matsuda 2016
  - Hydrating lotion (e.g. hydrolatum, OTC); consider referral to derm for topical steroids, topical/oral antihistamines, etc.
- Others

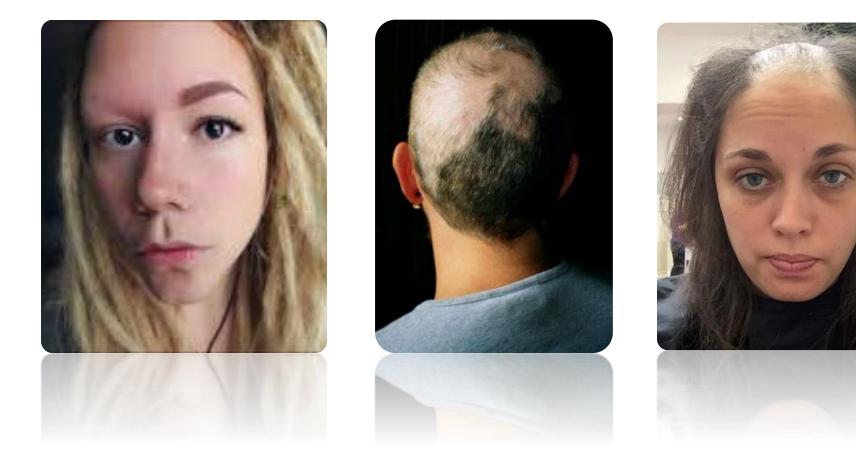

MASSACHUSETTS

- Silymarin, from milk thistle, 150-300mg PO BID (case series, n=3), serious drug interactions
- Inositol, 6g PO TID (case series, n=3), taken in powder form
  - Titration; https://www.bfrb.org/learn-about-bfrbs/treatment/self-help/120-inositol-and-trichotillomania
- Riluzole, 100mg PO BID, (case report), LFTs/CBC must be monitored given rare neutropenia and hepatitis, advise pt to report any febrile illness

**PSYCHIATRY ACADEMY** 

All rights reserved. Reprinted with permission

# Clinical features of TTM

- ~0.6-3.4% prevalence
- Women>>men
- Most often on scalp and eyebrows but may be anywhere including lashes, pubic hair, and others
- Hours daily
- Shame and avoidance
- Triggers: **idle hands**, anxiety, depression, anger, aesthetics, hairs not feeling right

Trichotillomania. (2012) [Photo]. From http://profoundpuns.hubpages.com/hub/Trichotillomania-The-Secret-Hair-Pulling-Compulsion ; Grant. *Trichotillomania, skin picking, and other body-focused repetitive behaviors*. 1st ed. 2012; Duke. *Clin Psychol Rev.* 2010; Duke. *J Anxiety Disord*. 2009; O'Sullivan. *Psychiatr Clin North Am*. 2000

## **Diagnosis of TTM in DSM-5**

- Recurrent hair pulling resulting in hair loss
- Repeated attempts to stop pulling
- Causes significant distress or impairment
- Hair pulling not secondary to medical condition or mental disorder (e.g. OCD)

#### Treatment of TTM

- **CBT considered first-line** with ~65-70% response rate
- Medication studies limited: NAC, olanzapine, and clomipramine can help
- **CBT more effective than meds** (clomipramine/fluoxetine) in comparator studies but studies limited

van Minnen. Arch Gen Psychiatry. 2003; Ninan. J Clin Psychiatry. 2000; Woods. Behav Res Ther. 2006

## First-line medications for TTM

- N-acetylcysteine (NAC), 1200 mg PO BID
  - Significantly improved TTM in single RCT (56% response rate)
  - OTC, 600mg PO BID x 2 wks, then 1200mg PO BID, >6wk trial
- Olanzapine, ~10 mg/d
  - Significantly improved TTM in single RCT (85% response rate)
  - Use tempered by long-term metabolic risks
- Clomipramine, ~100-180mg/d (mixed results)
  - Double blind crossover study of TTM showed CMI >> desipramine (~180 mg/d)
  - In placebo-controlled RCT, CMI doesn't differentiate from placebo (~100 mg/d)
  - Meta-analysis: clomipramine effect size .68 (moderate), habit reversal therapy effect size 1.41 (large), SSRI effect size .02 (none)

 MASSACHUSETTS GENERAL HOSPITAL
 Grant. Archives of General Psychiatry. 2009; Van Ameringen. J Clin Psychiatry. 2010; White & Koran. J Clin Psychopharmacol. 2011;

 PSYCHIATRY ACADEMY
 Swedo. NEJM. 1989; Ninan. J Clin Psychiatry. 2000; Bloch. Biol Psychiatry. 2007

## SSRIs generally ineffective in TTM

- No change in hair pulling in 3 RCTs (fluoxetine x 2, sertraline)
- No change in open-label trial of fluvoxamine
- Meta-analysis: SSRI effect size .02 (none), habit reversal therapy effect size 1.41 (large)

HOWEVER, SSRIs are sometimes prescribed when anxiety/depression are clear triggers for pulling and can be helpful in isolated cases

## Other medications for TTM

#### Naltrexone, 50-100 mg/d

- Mixed results in TTM
- Beneficial in small RCT of adult TTM but no effect in larger RCT; specifically effective for pts with FH of addiction
- Monitoring: hepatotoxicity with doses >300 mg/d, LFTs 1m, 3m, 6m, yearly
- **Open-label studies** 
  - **Topiramate** (n=14), ~160 mg/d
  - Aripiprazole (n=12), ~7.5 mg/d, 58% response rate, alternative to olanzapine
  - **Dronabinol** (n=14), 2.5-5 mg PO BID, RCT ongoing now
- Other options
  - Lithium (case series, n=10), 900-1500 mg/d
  - Bupropion XL (case series, n=2), 300-450 mg/d
  - **Inositol**, (case series n=3 but not recent RCT), 6g PO TID
    - Titration; https://www.bfrb.org/learn-about-bfrbs/treatment/self-help/120-inositol-and-trichotillomania

O'Sullivan. Trichotillomania, 1999 (pg 93-124); Grant. J Clin Psychopharmacol. 2014; Lochner. International Clinical Psychopharmacology. 2006; Grant. Psychopharmacology 2011; White. Int Clin Psychopharmacol. 2017

## Additional management options

- Waterproof eyebrow stamps
- Magnetic false eyelashes
- Hairpieces/wig
- Toppik

- Hairdressers specializing in TTM
- Trichotillomania learning center (TLC) support groups-bfrb.org

### **Hoarding Disorder**

# Hoarding

MASSACHUSETTS

GENERAL HOSPITAL

PSYCHIATRY ACADEMY

- Difficulty discarding items
- Significant clutter
- Often includes excessive acquisition
- 2-6% prevalence, men=women
- Variable insight
- Health problems from dust, mold, or pests
- Injury/death from falling items, structural dangers, fire
- Removal of children/dependent adults
- Homelessness due to eviction
- Risks to neighbors

Mataix-Cols. N Engl J Med. 2014; Steketee & Frost. Treatment for Hoarding Disorder : Therapist Guide. 2nd Ed. 2013; Frost. Depress Anxiety. 2011. Shadwulf (2001). Hoarding Living Room. [Photo]. From http://commons.wikimedia.org/wiki/File:Hoarding\_living\_room.jpg, Schmalisch (n.d.) Addressing Housing Issues. From https://hoarding.iocdf.org/addressing-housing-issues/

# **Diagnosis of hoarding in DSM-5**

- Persistent difficulty discarding items regardless of value
- Difficulty due to need to save items and distress associated with discarding them
- Hoarding leads to **clutter in active living areas**
- Causes significant distress or impairment
- Hoarding not due to medical condition (e.g. Prader-Willi syndrome) or another mental condition (MDD, OCD)
  - Specify if with excessive acquisition
  - Specify insight: good/fair, poor, or absent/delusional

# Assessing severity/safety

#### **Clutter Image Rating: Living Room**

Please select the photo below that most accurately reflects the amount of clutter in your room.

- Clutter Image Rating Scale (CIR)
- Activities of Daily Living-Hoarding Scale (ADL-H)
- Dependents/animals
- Eviction

Steketee & Frost. Compulsive hoarding and acquiring: A therapist guide. 2007; Steketee & Frost. Treatment for Hoarding Disorder : Therapist Guide. Second Ed. 2013; Frost. Obsessive Compuls Relat Disord. 2013. Clutter Image Rating. (n.d.). [Photo]. From

http://global.oup.com/us/companion.websites/umbrella/treatments/hidden/pdf/CIR\_photos.pdf with permission from Dr. Steketee www.mghcme.org

### **Treatment of hoarding**

**CBT** is main treatment, no well-established medication treatments

#### **Skills training**

- Plan categories for unwanted objects
- Plan categories and final locations for wanted objects

#### **Cognitive restructuring**

• Identify and challenge beliefs that maintain hoarding

#### Exposure to discarding and nonacquiring

- Make discarding hierarchy, start with items that are least anxiety-provoking
- Make non-acquisition trips
- > RCT of CBT vs. waitlist, 41% show significant clinical improvement w/ large effect sizes on hoarding scales

## Medication treatment of hoarding

- Meds (SSRIs) thought to be ineffective but being reconsidered
- **Earlier studies not representative**: excluded pts w/ hoarding who did not have other OCD sx
- Recent open-label studies w/o this exclusion **show medication benefit**:

Drug	Mean dose	UCLA Hoarding Severity Scale reduction	Partial responders	Full Responders
Paroxetine (n=79)	40 mg/d	31%	50%	28%
Venlafaxine (n=24)	200 mg/d	36%	70%	32%
Atomoxetine (n=11)	60 mg/d	41%	81%	54%

- **Paroxetine/venlafaxine XR accelerate response** from 26 wks (CBT)>12 wks
- No medication RCTs in hoarding ongoing; consider trial of atomoxetine, venlafaxine, or SSRI based on above prelim data

#### Treatment tips for hoarding

# Forced interventions not recommended

#### Team approach

STOP PICKING - START LIVING

- High SSRI dosing in BDD/OCD
- CBT is a key treatment for all OCRDs
- In skin picking/TTM, introduce stimulus control early and consider NAC
- Screen your patients
