Risk Factors for Suicidal Thoughts and Behaviors: A Meta-Analysis of 50 Years of Research

"across five decades, intervention efficacy has not improved; all interventions produced similarly small effects, and no intervention appeared significantly and consistently stronger than others"

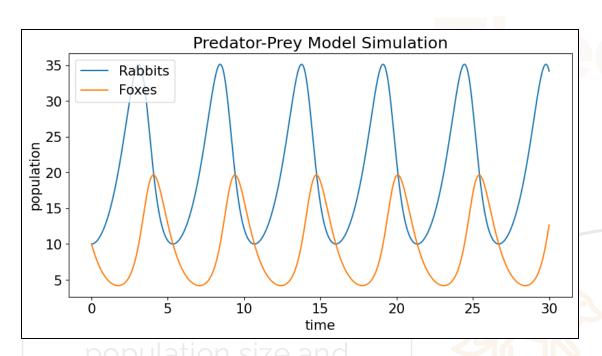

# Verbal vs. *Formal*Theories

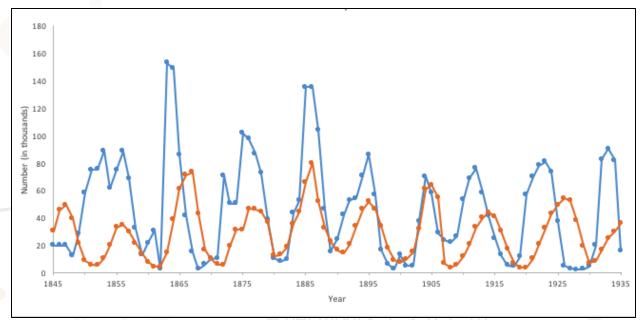

"The rate of change in fox & rabbit populations is related to their current population size and frequency of interaction."

```
\frac{dR}{dt} = \alpha R - \beta RF
\frac{dF}{dt} = -\gamma F + \delta RF

## **Today:**

Formalizing a Theory of Suicide

Step 1: Starting with External Stressors

## mathematical model (formalization)

$$s_t = s_0 \exp\left(\left(\mu - \frac{\sigma^2}{2}\right)t + \sigma W_t\right)$$

verbal theory

Step 1: Starting with External Stressors

# mathematical model (formalization)

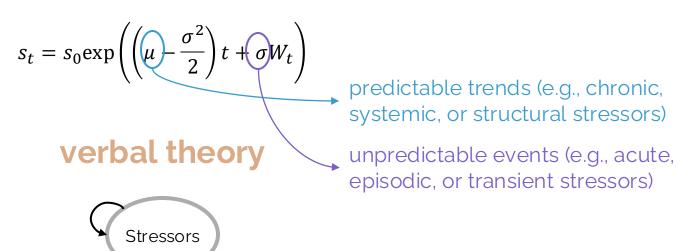

$$s_t = s_0 \exp\left(\left(\mu - \frac{\sigma^2}{2}\right)t + \sigma W_t\right)$$
predictable trends (e.g., chronic, systemic, or structural stressors)
